1. Introduction

Cross-platform development mein ek shared codebase se alag-alag platforms ke liye application banayi jaati hai. Is proposed project mein Flutter aur Dart ka use karke Android aur web ke liye ek simple To-Do app design ki gayi hai.

2. Objective

Project ka aim daily tasks ko add, view, complete aur delete karne wali app banana hai. Shared codebase ke through dono platforms par similar features dena aur screen size ke mutabik layout adjust karna iska main focus hai.

3. Required Tools

- Computer ya laptop, Flutter SDK aur Dart.
- Code editor, jaise Visual Studio Code.
- Android SDK aur Android device ya emulator.
- Web testing ke liye supported browser, jaise Chrome.

4. Working Procedure

1. Flutter project banakar task input field, Add button aur task list ka interface taiyar kiya jaata hai.
2. User task enter karke Add button dabata hai. Blank input reject kiya jaata hai.
3. Har task ke saath checkbox aur delete option diya jaata hai. Changes par screen ki list update hoti hai.
4. Shared app code ko Android aur web par run karke layout aur functionality check ki jaati hai.

5. Testing Plan aur Expected Output

Task add karna, complete mark karna, delete karna aur blank input reject karna dono platforms par test kiya jayega. Chhoti aur badi screen par layout bhi check hoga. Expected output ek responsive task list hai jo user ke actions ke saath update hoti hai.

6. Applications aur Limitations

App personal planning aur study tasks manage karne mein useful ho sakti hai. Is basic version mein tasks sirf running app ki memory mein rakhe jaate hain; app restart ya web page reload par data reset ho sakta hai. Login, reminders aur cloud synchronization shamil nahi hain.

7. Conclusion

Yeh project Flutter widgets, user input aur app state management ka basic use samjhata hai. Shared codebase development ko simplify kar sakta hai, lekin har target platform par testing zaroori hai. Future mein local storage aur reminders add kiye ja sakte hain.

Note: Yeh proposed project ki report hai; actual implementation ya testing results claim nahi kiye gaye hain. Is document mein koi picture nahi hai.
